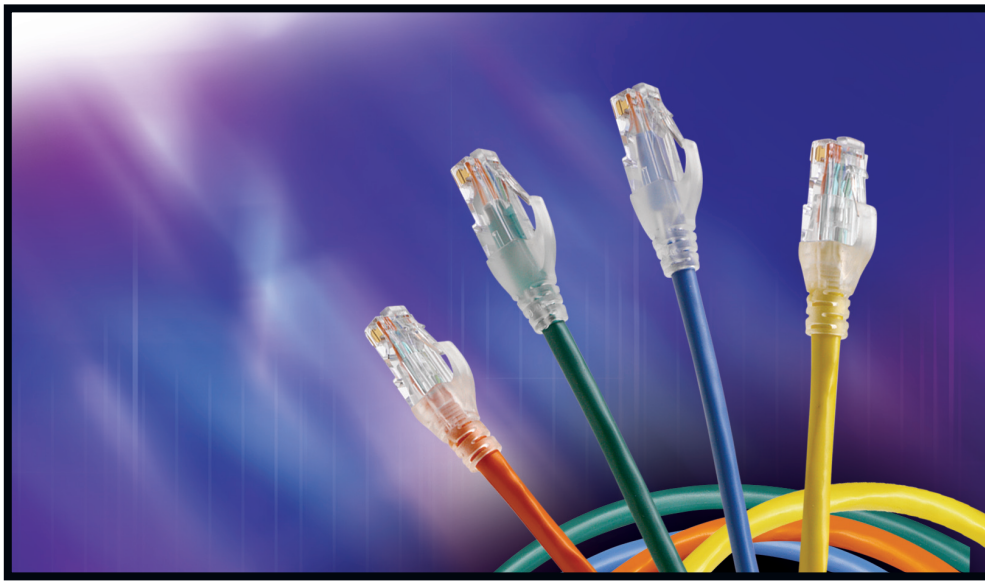
10GX®, CAT6+ and CAT5E Bonded-Pair Modular Cords

Belden's new patch cords are comprised of its patented Bonded-Pair cable and an improved boot construction to ensure optimum electrical performance – even in high-density installations which experience frequent handling stresses.



Belden® Bonded-Pair Modular Cords Are the Only Cords That Pass the Stringent TIA Mechanical Stress Reliability Specifications and Provide Optimum Electrical Performance

The 10GX, CAT6+ and CAT5E series of Bonded-Pair Modular Cords are made with Belden's patented robust design Bonded-Pair cables. These new modular cords offer the best combination of transmission performance and physical integrity. Bonded-Pair cable technology ensures that these cords meet the stringent TIA mechanical stress reliability specifications. They are made with solid conductors for improved attenuation in long patch cords and pigtails often used in Data Centers. The combination of Bonded-Pair cable, improved strain relief and a flexible boot allows for optimum performance in high-density installations. The new simplified ordering code scheme allows for customization of Bonded-Pair Patch Cord and Pigtail configurations.

Features and Benefits

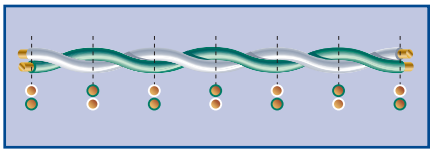
- Made with Belden's patented Bonded-Pair cable for exceptional structural stability and electrical performance in environments where frequent moves, adds, and changes are routine
- Made with small diameter Bonded-Pair cable for greater flexibility and higher density installations
- Solid conductors improve attenuation and are needed in long patch cords and pigtails to eliminate the need for cable derating in open-office cabling
- Built with improved strain relief and a flexible boot for optimum protection in high-density installations
- Wrap-around label on each cord for easier product identification and length sorting
- Exceeds TIA and ISO transmission and mechanical performance requirements
- New ordering code scheme to customize Bonded-Pair Patch Cord and Pigtail configurations

Applications

- Patch panel or equipment connections in Data Centers or Telecommunications Rooms
- Consolidation point connections
- Telecommunications outlet or MUTOA connections

Bonded-Pair Cable

Belden's breakthrough Bonded-Pair cables are the result of a patented design that bonds the individual insulated conductors together along their longitudinal axis. This unique physical characteristic results in uniform conductor-to-conductor spacing – a key aspect in consistent electrical performance. Even when a Bonded-Pair Modular Cord is subjected to everyday handling stresses such as bending, coiling and pulling, its conductor-to-conductor spacing remains stable.



Belden's Bonded-Pair Cables offer uniform conductor-to-conductor spacing even when subjected to handling stresses.

Configuration Matrices
10GX, CAT6+ and CAT5E Bonded-Pair Modular Cords

The following configuration matrices provide information on how to customize Bonded-Pair Patch Cord and Pigtail configurations and generate part numbers. Please refer to the Ordering Information for the most popular part numbers. For other configuration choices, such as custom lengths, contact our Customer Service Department for more information.

Patch Cords Part Number Example:

C601106007 is CAT6+ Patch Cord, Bonded-Pair, 4-Pair, 24 AWG Solid, CMR, T568A/B-T568A/B, Blue, 7 ft (2.1 m)

Performance			Cable			Termination			Standard Color			Length		
10GX	=	CA	10GX Bonded-Pair, Solid, CMR	=	21	T568A/B-T568A/B	=	1	Brown	=	01	1 ft. (0.3 m)	=	001
			10GX Bonded-Pair, Solid, CMP	=	22				Red	=	02	2 ft. (0.6 m)	=	002
CAT6+	=	C6	C6/5 Bonded-Pair, Solid, CMR	=	01				Orange	=	03	3 ft. (0.9 m)	=	003
CAT5E	=	C5	C6/5 Bonded-Pair, Solid, CMP	=	02				Yellow	=	04	4 ft. (1.2 m)	=	004
									Green	=	05	5 ft. (1.5 m)	=	005
									Blue	=	06	6 ft. (1.8 m)	=	006
									Purple	=	07	7 ft. (2.1 m)	=	007
									Gray	=	08	8 ft. (2.4 m)	=	008
									White	=	09	9 ft. (2.7 m)	=	009
									Black	=	00	10 ft. (3.0 m)	=	010
												11 ft. (3.4 m)	=	011
									TIA 606 Color			12 ft. (3.7 m)	=	012
									Red	=	12	13 ft. (4.0 m)	=	013
									Orange	=	13	14 ft. (4.3 m)	=	014
									Yellow	=	14	15 ft. (4.6 m)	=	015
									Green	=	15	20 ft. (6.1 m)	=	020
									Blue	=	16	25 ft. (7.6 m)	=	025
									Purple	=	17			

Pigtails Part Number Example:

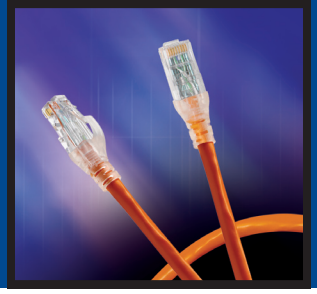
C601309025 is CAT6+ Pigtail, Bonded-Pair, 4-Pair, 24 AWG Solid, CMR, T568B-Open, White, 25 ft (7.6 m)

Performance			Cable			Termination			Standard Color			Length		
10GX	=	CA	10GX Bonded-Pair, Solid, CMR	=	21	T568A-Open	=	2	Brown	=	01	15 ft. (4.6 m)	=	015
			10GX Bonded-Pair, Solid, CMP	=	22	T568B-Open	=	3	Red	=	02	20 ft. (6.1 m)	=	020
CAT6+	=	C6	C6/5 Bonded-Pair, Solid, CMR	=	01				Orange	=	03	25 ft. (7.6 m)	=	025
CAT5E	=	C5	C6/5 Bonded-Pair, Solid, CMP	=	02				Yellow	=	04	35 ft. (10.6 m)	=	035
									Green	=	05	50 ft. (15.2 m)	=	050
									Blue	=	06	75 ft. (22.9 m)	=	075
									Purple	=	07	100 ft. (30.5 m)	=	100
									Gray	=	08			
									White	=	09			
									Black	=	00			
									TIA 606 Color					
									Red	=	12			
									Orange	=	13			
									Yellow	=	14			
									Green	=	15			
									Blue	=	16			
									Purple	=	17			

Crossover Patch Cords Part Number Example:

C501502010 is CAT5E Patch Cord, Bonded-Pair, 4-pair, 24 AWG Solid, CMR, Crossover IEEE, Red, 10 ft (3.0 m)

Performance			Cable			Termination			Standard Color			Length		
10GX	=	CA	10GX Bonded-Pair, Solid, CMR	=	21	Crossover T568A-T568B	=	4	Red	=	02	1 ft. (0.3 m)	=	001
			10GX Bonded-Pair, Solid, CMP	=	22	Crossover IEEE	=	5	Yellow	=	04	2 ft. (0.6 m)	=	002
CAT6+	=	C6	C6/5 Bonded-Pair, Solid, CMR	=	01							3 ft. (0.9 m)	=	003
CAT5E	=	C5	C6/5 Bonded-Pair, Solid, CMP	=	02							4 ft. (1.2 m)	=	004
												5 ft. (1.5 m)	=	005
												6 ft. (1.8 m)	=	006
												7 ft. (2.1 m)	=	007
												8 ft. (2.4 m)	=	008
												9 ft. (2.7 m)	=	009
												10 ft. (3.0 m)	=	010
												11 ft. (3.4 m)	=	011
												12 ft. (3.7 m)	=	012
												13 ft. (4.0 m)	=	013
												14 ft. (4.3 m)	=	014
												15 ft. (4.6 m)	=	015
												20 ft. (6.1 m)	=	020
												25 ft. (7.6 m)	=	025



Ordering Information

10GX, CAT6+ and CAT5E Bonded-Pair Modular Cords

These tables provide ordering numbers for the most popular Bonded-Pair Patch Cords and Pigtails. Refer to configuration matrices to customize Bonded-Pair Patch Cord and Pigtail configurations and generate part numbers. For other configuration choices, contact our Customer Service Department for more information.

Bonded-Pair Patch Cords

10GX, CAT6+ and CAT5E Bonded-Pair Modular Cords

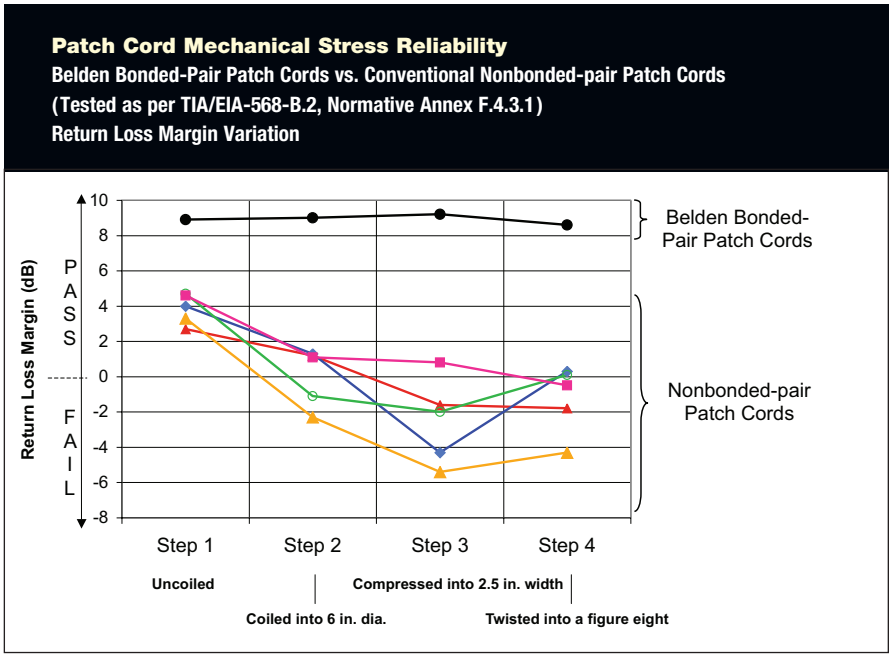
The Bonded-Pair Advantage in Modular Cords

A twisted-pair is comprised of two insulated conductors. The center-to-center distance of the copper within the two conductors of the pair, or its centricity, is a key parameter that influences the pair's electrical performance *(see Figure 1)*. Ideally, this distance should remain fixed and stable along the length of the twisted pair. Frequent handling stress applied to modular cords disturbs this relationship and therefore also affects the cable's electrical performance. The slightest manipulation of a nonbonded-pair can cause gaps between the two conductors of the pair.

Even minor disturbances in the spacing can have a significant impact on the electrical performance, particularly impedance, return loss and crosstalk. Since the two conductors of a Bonded-Pair cable are bonded together, gaps cannot form in between the conductors. The physical integrity of the pair is maintained, resulting in consistent electrical performance.

The stresses of routine modular cord handling will change the physical structure of a non-bonded-pair cable. When cords are squeezed and bent in pathways and cable managers, the majority of the stress is distributed to the pairs of the cable. The pairs must withstand this force despite being manipulated - while, ideally, maintaining a consistent centricity. Furthermore, any kink in the cord's cable also changes the relationship of the conductors of a pair. For these reasons, the electrical properties of a nonbonded-pair cord can degrade over time *(see Figure 2)*.

In comparison, because of the robust design of Bonded-Pair cords, concerns about stress and bend radius are virtually eliminated. Bonded-Pair Modular Cord cables boast significantly higher maximum pulling tensions and tighter bend radii over the recommended guidelines to accommodate real-world installation issues. Thus, the electrical performance of Bonded-Pair Modular Cords experiences few changes over time and use.



Only Belden Bonded-Pair Patch Cords maintain their Return Loss performance throughout each step of the mechanical stress test; providing an exclusive performance advantage.

The integrity of cabling systems and entire networks depends on the integrity of modular cords; they are the weakest link in the channel. When the performance of a simple cord in the network is compromised, overall system performance is jeopardized. Bonded-Pair Modular Cords maintain their physical integrity – and therefore their electrical performance – even when subjected to handling stresses in workstation outlets and patch panel installations. This means less trouble-shooting and downtime for the end-user.

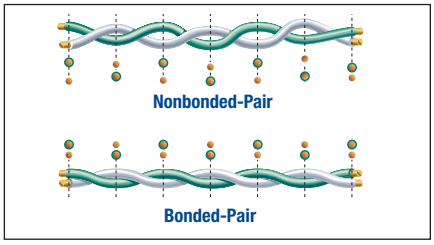


Figure 1: The distance between the conductors, or the conductor-to-conductor centricity, should remain fixed and stable along the length of the twisted pair.

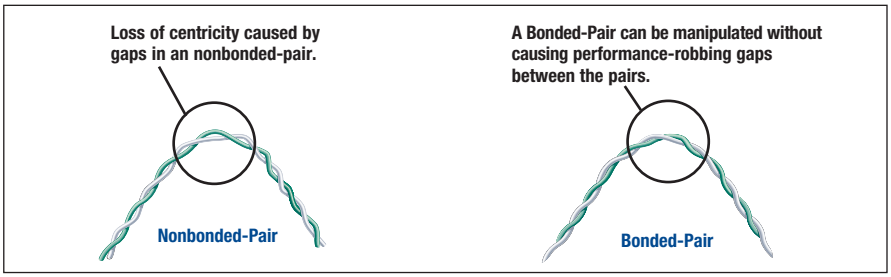

Figure 2: The slightest manipulation of a nonbonded-pair (left) can cause gaps between the conductors of the pair and impair electrical performance. Gaps cannot form between the conductors in a Bonded-Pair (right), resulting in consistent electrical performance.
